# PANA LOG

## 2 Easy Steps to Call Management

1 Select your telephone system

**Setup Time: 1-Minute**

2 Start collecting calls

### Call Collection Process

Panasonic Telephone Systems send call data (SMDR) through the RS232 port of the unit. PanaLog receives the call information from your telephone system immediately once the call ends. The data is stored on your computer hard drive and is never overwritten. We organize the data on a viewing screen (Analyze Call Data) which allows you to view all your call activity utilizing easy search windows. Reports and graphs can be generated from any of the information provided from the Panasonic SMDR data.

## Additional Information

### SMDR FACTS

Panasonic SMDR generates information about all inbound/outbound call activity to include: Date, Time, Extension, CO, Dialed Number, Caller ID\*, Ring Time, Call Duration, Account Codes and the Condition (calls not answered, call transfer and more).

### Caller ID Capabilities

Caller ID is necessary for inbound call tracking. Caller ID card(s) must be installed in your telephone system and Caller ID service ordered from your local telephone company. Check your telephone system specifications for call data output. All telephone systems provide different options and PanaLog will only provide reports based on information provided by your telephone system.

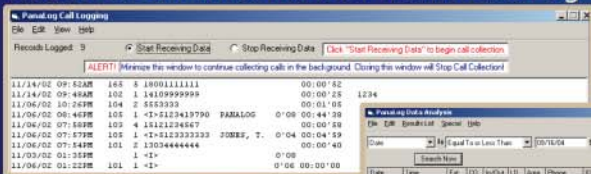

### Computer Requirements

Minimal Requirements; CD-ROM Drive, Floppy Drive, 486 with 32M RAM, 100MB free hard drive storage, 9-pin Serial Com Port. Supports Windows® 95/98/NT/2000/ME/XP

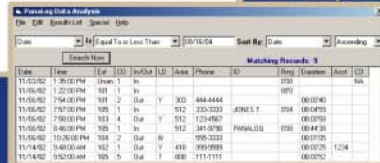

## Fast & Easy Connection / Setup

Simply connect our CAT5 SMDR cable kit to your telephone system and your computer. That's all there is to it. We will provide Free Tech Support and Free Training so you can produce powerful call management reports in seconds.

### Receive Call Information from PanaLog

### Analyze

### Easy Point & Click Menu Options

Direct connection between your telephone system and computer. Remote Workstation capability (Optional) via CAT5 connection.
